## EDUCATION

### Carnegie Mellon University

#### Master of Information Systems Management

- Concentration in AI Management

Pittsburgh, PA  
August 2026 - December 2027

### University of Wisconsin-Madison

#### Bachelor of Science in Computer Science

- GPA: 3.789/4.0

Madison, WI  
Sep 2019 - Dec 2025

## EXPERIENCE

### PBS Wisconsin

#### Student Software Engineer

Madison, WI

Jan 2025 - April 2025

- Built personalized recommendation engine with AWS **Personalize**; optimized outputs by experimenting with datasets and Personalize recipes
- Worked in a team of 4 using **Agile** development to iteratively evaluate and improve model outputs based on performance metrics and stakeholder feedback
- Designed **ETL** workflows with AWS Glue, Lambda, Step Functions, and S3 to process **50k+** user interaction records
- Exposed recommendation results via **REST API** (API Gateway + Lambda) to **React** frontend

### DataCommand

#### Site Reliability Engineer Intern

Seoul, South Korea

May 2024 - August 2024

- Built **automation pipeline** with Apache Airflow and Ansible to streamline QA and system operations
- Built the pipeline to orchestrate workflows with **Airflow**, automate system configurations and deployments with **Ansible**, and manage test environments using **KVM**-based VMs
- Integrated **Redis Streams** for reliable orchestration across containers (Airflow) and local processes (Ansible)
- Automated QA scripts in Python, testing **36%** of critical software with results logged in PostgreSQL

## PROJECTS

### Badger Class Tracker

May 2025 - Present

- Built a **production-grade event-driven system** on AWS (Lambda, EventBridge, DynamoDB, SES) to monitor real-time enrollment changes and send automated email alerts
- Designed a **single-table DynamoDB schema with GSI fan-out** for **O(1)** subscription lookups and scalable section-to-subscriber notification delivery
- Validated performance with **k6 load tests (1.1M+ requests)** achieving **99.73% success** with **<300ms p95 latency at 100 concurrent users**
- Established **SLO-driven observability** with CloudWatch EMF + **Grafana** dashboards, DLQ retry pipeline, structured logs, and automated alarms
- Provisioned infrastructure via **AWS CDK (TypeScript)** including CI/CD, Cognito **OAuth** login, **Swagger**-documented REST API, and 1-minute polling for real-time updates

### Madison Timeline

Feb 2024 - Present

- Developing a social networking platform for UW Madison students, enabling communication and collaboration
- Collaborating with a cross-functional team of 4 members, including frontend developers
- Utilizing **TypeScript** and **Next.js** serverless function to build a high-performance, scalable, and resilient application following **JAMStack** architecture
- Implementing **CI/CD pipelines** using **GitHub Actions** for continuous integration, with automated testing via **React Testing Library**, **Jest**, and **Cypress**, and deploying to **Vercel** for continuous deployment
- Managing the database with PostgreSQL through **Supabase** for efficient deployment and database management

## TECHNICAL SKILLS

**Languages:** Python, Java, C, Javascript/Typescript, Go, SQL

**Framework/Libraries:** Next.js, Node.js, Express.js, Gin, React, React Native

**Tools/Technologies:** GCP, AWS, Docker, Git, GitHub, Redis, Postman, Swagger, K6, Ansible, Apache Airflow
